**Abstract of DE19954978**

The seat squab has an actively ventilated cushion pad (11) with at least one foam layer (17), covered by a seat cushion covering (12) of a pervious material and divided into central and forward seat surfaces between opposing side edges. A perforated electric heating mat (19) is inserted between the cushion pad and the cushion covering, with the perforation spacing density being less in the region of the central seat surface than in the forward seat region and each edge region.
